

ADM Customer Orders Sample Schema

Schema Description

Customer Orders (CO) is a Oracle schema resembling a generic customer orders management schema. The Customer Orders (CO) schema records the details of transactions made by a retail application.

The company sells a variety of products, which are maintained in the products table. Each product has a unique identification number, name, price, details stored in a JSON object and product image details.

The orders placed by the customer are tracked in the orders table using the order identification number, date and time when the order was placed, customer details, order status and the store information.

The details of the products in a particular order are also tracked in the adm_order_items table using the order identification number. Details of the products, price at the time of purchase, quantity and shipment are recorded.

The information of a customer placing an order is tracked in the adm_customers table. Each customer has an identification number, name, and email address that is used for communication of the orders.

The customers can purchase the products in stores or online through the company's website. The information for all of the stores and their corresponding physical and virtual addresses is tracked in the stores table. The store information is also recorded in the order details.

The shipment details of the orders placed such as the delivery address, customer details, store information and the shipment status are stored in the shipments table.

Schema Details

Schema Objects	Object Type	Objects
Index		customers_name_i, orders_customer_id_i, orders_store_id_i, products_pk, stores_pk, store_name_u, customers_pk, customers_email_u, orders_pk, order_items_pk, order_items_product_u, inventory_product_id_i, inventory_pk, inventory_store_product_u, shipments_store_id_i, shipments_customer_id_i, shipments_pk
Table		adm_customers, adm_stores, adm_products, adm_orders, adm_order_items, adm_shipments, adm_inventory
View		customer_order_products, store_orders, product_reviews, product_orders

Table Descriptions

ADM_CUSTOMERS

Name	Null	Type	Relationships
CUSTOMER_ID	NOT NULL	INTEGER	relates each row of the table customers to none or more rows of customer_id in the orders table.
EMAIL_ADDRESS	NOT NULL	VARCHAR2(255)	

Name	Null	Type	Relationships
FULL_NAME	NOT NULL	VARCHAR2(255)	

ADM_STORES

Name	Null	Type	Relationships
STORE_ID	NOT NULL	INTEGER	relates each row of the table stores to none or more rows of store_id in the customers table.
STORE_NAME	NOT NULL	VARCHAR2(255)	
WEB_ADDRESS		VARCHAR2(100)	
PHYSICAL_ADDRESS		VARCHAR2(512)	
LATITUDE		NUMBER(9,6)	
LONGITUDE		NUMBER(9,6)	
LOGO		BLOB	
LOGO_MIME_TYPE		VARCHAR2(512)	
LOGO_FILENAME		VARCHAR2(512)	
LOGO_CHARSET		VARCHAR2(512)	
LOGO_LAST_UPDATED		DATE	

ADM_PRODUCTS

Name	Null	Type	Relationships
PRODUCT_ID	NOT NULL	INTEGER	relates each row of the table products to none or more rows of product_id in the order_items table.
PRODUCT_NAME	NOT NULL	VARCHAR2(255)	
UNIT_PRICE		NUMBER(10,2)	

Name	Null	Type	Relationships
PRODUCT_DETAILS		BLOB	
PRODUCT_IMAGE		BLOB	
IMAGE_MIME_TYPE		VARCHAR2(512)	
IMAGE_FILENAME		VARCHAR2(512)	
IMAGE_CHARSET		VARCHAR2(512)	
IMAGE_LAST_UPDATED		DATE	

ADM_ORDERS

Name	Null	Type	Relationships
ORDER_ID	NOT NULL	INTEGER	relates each row of the table orders to none or more rows of order_id in the order_items table.
ORDER_TMS	NOT NULL	TIMESTAMP(6)	
CUSTOMER_ID	NOT NULL	INTEGER	relates none or more rows of the table orders to the corresponding values in the customer_id column of the table customers.
ORDER_STATUS	NOT NULL	VARCHAR2(10)	
STORE_ID	NOT NULL	INTEGER	relates none or more rows of the table orders to the corresponding values in the store_id column of the table stores.

ADM_ORDER_ITEMS

Name	Null	Type	Relationships
ORDER_ID	NOT NULL	INTEGER	relates each row of the table order_items to exactly one value of order_id in the orders table.
LINE_ITEM_ID	NOT NULL	INTEGER	

Name	Null	Type	Relationships
PRODUCT_ID	NOT NULL	INTEGER	relates each row of the table order_items to exactly one value of product_id in the products table.
UNIT_PRICE	NOT NULL	NUMBER(10,2)	
QUANTITY	NOT NULL	INTEGER	
SHIPMENT_ID		INTEGER	

ADM_SHIPMENTS

Name	Null	Type	Relationships
SHIPMENT_ID	NOT NULL	INTEGER	
STORE_ID	NOT NULL	INTEGER	
CUSTOMER_ID	NOT NULL	INTEGER	
DELIVERY_ADDRESS	NOT NULL	VARCHAR2(512)	
SHIPMENT_STATUS	NOT NULL	VARCHAR2(100)	

ADM_INVENTORY

Name	Null	Type	Relationships
INVENTORY_ID	NOT NULL	INTEGER	
STORE_ID	NOT NULL	INTEGER	
PRODUCT_ID	NOT NULL	INTEGER	
PRODUCT_INVENTORY	NOT NULL	INTEGER
